Search for and choose an image

Search for and choose an image

Context

Images and pictograms illustrate surfaces, actions, protective measures and useful instructions.

Starting point

Library → Images → eCare; or a task pictogram

Prerequisites

- Identify the action, surface or protection to illustrate.

Steps

1. Open the library

Open Library > Images, then the eCare tab. To illustrate a task while entering it, click its pictogram directly: an image selection window opens.

2. Find an illustration

Use keywords and categories: Actions, Surfaces, Safety pictograms, Durations and Frequencies, PPE. Select an image matching the instruction to illustrate.

3. Extend the resources

ASW PRO maintains the eCare library; you can request a new illustration. For your own images and their organisation, use the Company or Group library: see the next page.

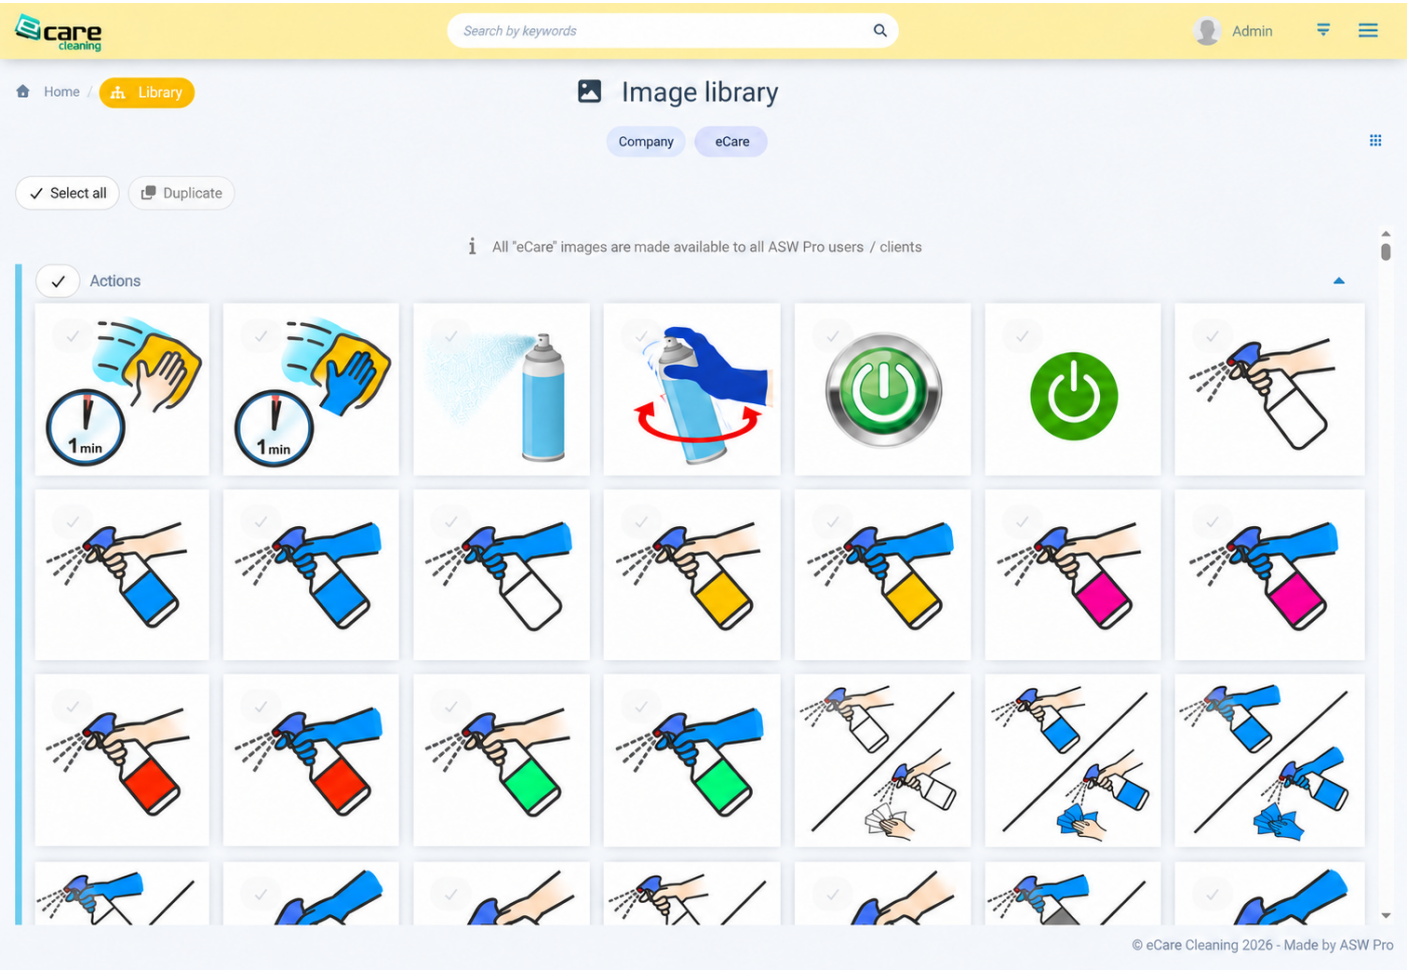

Expected result

The selected image illustrates the instruction described in the text.

Remember

- Check that the image and text describe the same action. Product illustrations and references used in this guide are generic.
